

Dojo AI: Intelligent, Autonomous Security & Cloud Operations

Sumo Logic's agent-ready telemetry powers intelligent security & cloud operations

Every AI detection, investigation, and response starts with telemetry. Sumo Logic Dojo AI agents are built on our trusted data foundation to help you move from reactive to autonomous.

The Context Layer

Where telemetry becomes usable: clean, queryable context for agents and analysts, instead of raw noise.

- **Secure data lake and pipeline management:** Ingests structured and unstructured data and enriches it at ingestion, producing parsed fields, threat intelligence, and distilled signals from millions of raw events.
- **Data analytics:** Delivers high-performance search, visualization, and root cause analysis across reliability, infrastructure, compliance, and security workflows.
- **Modern SIEM:** Query data in plain English, get concise AI-written summaries, and make faster decisions.

The Agentic Layer

Built on modern AI models and technologies, the Dojo AI agentic layer puts the context layer to work. Specialized agents automate routine tasks and speed up investigations, giving security teams the freedom to focus on the highest-value issues facing their organization. Key agents include:

- **Mobot:** Your Sumo Logic assistant, connecting you to agents and data through natural language.
- **SOC Analyst Agent:** Automatically investigates alerts and delivers evidence-backed verdicts, cutting manual triage and reducing MTTR up to 75%.
- **Root Cause Agent:** Automates triage and investigation across telemetry to deliver likely cause, blast radius, and recommended next steps, slashing MTTR. Coming soon.
- **Sumo Logic MCP Server:** Connects AI clients like Claude Code and GitHub Copilot to Sumo Logic's SIEM and Log Analytics through governed API tools.

Agents as teammates

We're evolving Dojo AI agents to proactive teammates that take on repetitive work, remember what they learn, and get sharper with every investigation. The longer you run Sumo Logic, the less toil your team carries.

Value of the Dojo

1. **Take control of your data.** Intelligent data pipeline management that gives you precise control over data ingestion, routing, and enrichment so agents always work from signal, not noise.
2. **Do more with less effort.** Agents handle time-intensive log analysis and platform management work— surfacing what matters, flagging what's broken, and closing gaps you didn't know existed.
3. **Detect. Investigate. Resolve. *Faster.*** Agents work autonomously and on demand to improve your posture, investigate faster, and resolve more confidently.
4. **Activate agents that know your environment.** Agents learn your environment over time, remember past incidents, and work where your team already operates, so nothing gets lost between tools or handoffs.
5. **Prove the value of what you're running.** Surface the business impact of your Sumo Logic investment across every team and tenant.

Proven results

Sumo Logic's own SOC has spent nine months on an agentic-first security program with Dojo AI. The result? 89% reduction in median time-to-triage and 64% faster MTTR on confirmed incidents.
