Cloud-Native or bust

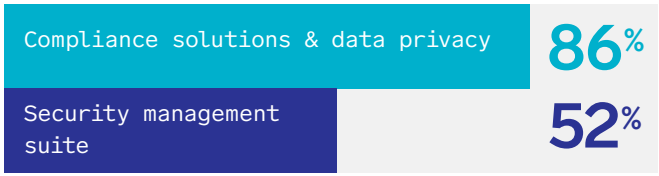
Security & Compliance-SaaS Solutions Close the Gap

58% say it is very important that tools used to address **DATA PRIVACY** are also used to address **SECURITY CONCERNS**

Primary compliance challenges

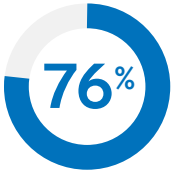
Multiple IT environments with different requirements

Future significant investments

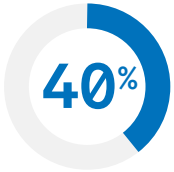


67% say data privacy regulations like **GDPR, CCPA,** or **CHANGING DATA CONTROLS** are the biggest compliance challenges

Shifting security strategies



Security teams have significantly or completely shifted their security strategy



Respondents have suspended or postponed IT security projects to address compliance issues

Legacy security tools cannot handle the massive increases in information processed and analyzed in the cloud

Digital businesses need a cloud-native solution to create fluency in both cloud infrastructure and application stacks to tightly manage security and compliance.

Challenging compliance regulations drive security strategies

Maintaining compliance when handling thousands upon thousands of log messages with potentially sensitive data, is a monumental task.

Teams split across two differing approaches
